

Spreading Rate & Opacity Charts

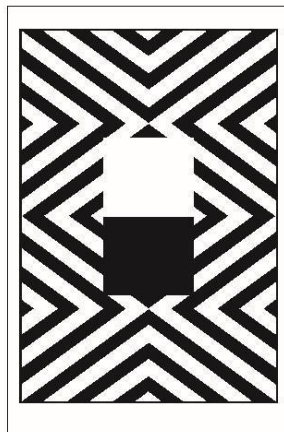

We supply a wide range of drawdown cards and charts for virtually any type of coating. Test charts are easy to use and are a good value substrate for testing.

Suitable for testing architectural, industrial, automotive, wood finishes or even cosmetic products. Depending on the properties of the product to be tested and its application, different types of charts are available.

Chart Finishes

Depending on the types of solvent used in coating formulations a drawdown chart may require a higher level of solvent resistance. With that in mind, we offer two finishes, clear coated and film laminated.

Please see table on next page for full range.
